

Construction *Designs*

Interior Space Planning

Focusing on Design & Construction flows through 5 phases of development.

This is the clients view of the project.

Schematic Design:

An explanation of how the project will be implemented.

Design Development:

What the project consists of: methods, materials, and specifications.

Budget Feasibility:

This is budget reality and the cost of actually doing the job.

Construction Administration:

This insures the clients ideas are carried the most practical way for design, budget, and client.

In this philosophy, the design & budget are implemented at the start and brings the client in as part of the design team, with their ideas, experience and feelings considered in every phase.
